

PRESS RELEASE

08 July 2020

Walk Vascular, LLC (Irvine, CA) and Veryan Medical (Horsham, UK) have announced that from today Veryan Medical will support Walk Vascular in the commercialization of the innovative JETi Peripheral Thrombectomy System in Germany.

Walk Vascular's JETi Thrombectomy System employs an internal jet, located safely just inside its catheter mouth, capable of engaging large thrombus volumes through a miniature lumen, rapidly clearing peripheral vessels that can often prove challenging for standard aspiration devices.

"By working with Veryan Medical we can hit the ground running" comments David Look, President and CEO of Walk Vascular. "Veryan provides an invaluable catalyst to our commercial efforts, providing access to key opinion leaders in Germany through an experienced sales team with clinical expertise."

"We are pleased to be working with Walk Vascular and the JETi technology, a proven solution that safely and effectively restores blood flow in peripheral thrombectomy procedures," says Nick Yeo, Veryan Medical's CEO. "We are proud to support innovators like Walk Vascular to provide insights, marketing strategy, and a top-tier salesforce to ensure commercial success and clinical adoption. JETi and Veryan's novel BioMimics 3D stent are an exciting combination both for our sales team and our customers."

About the JETi 88 Peripheral Thrombectomy System

The JETi Thrombectomy System is intended to remove/aspirate fluid and break-up soft emboli and thrombus from the peripheral vasculature and to sub selectively infuse/deliver diagnostics or therapeutics with or without vessel occlusion.

About Walk Vascular

Headquartered in Irvine, CA, Walk Vascular is a commercial-stage medical device company focused on developing products to treat and transform the lives of patients suffering from peripheral vascular thromboembolic disease. The current product offering consists of a novel catheter-based solution that blends an efficacious mix of power and precision. JETi Catheters commercialized today are CE Marked and FDA-cleared, are indicated for the breakup and removal of clot within the peripheral vasculature and are used to treat patients suffering from peripheral arterial occlusions (PAO) and deep vein thrombosis (DVT).
